

We have a strong focus in special business niches with clearly defined strategy for future growth.

We offer:

- Secured steel availability
- Extensive experience & know-how
- Comprehensive expertise in interlocking technology
- Advanced automation processes
- Capability of supplying globally
- Highly educated and experienced personnel

Superior quality

Innovative solutions

Customer focus

Global supplies

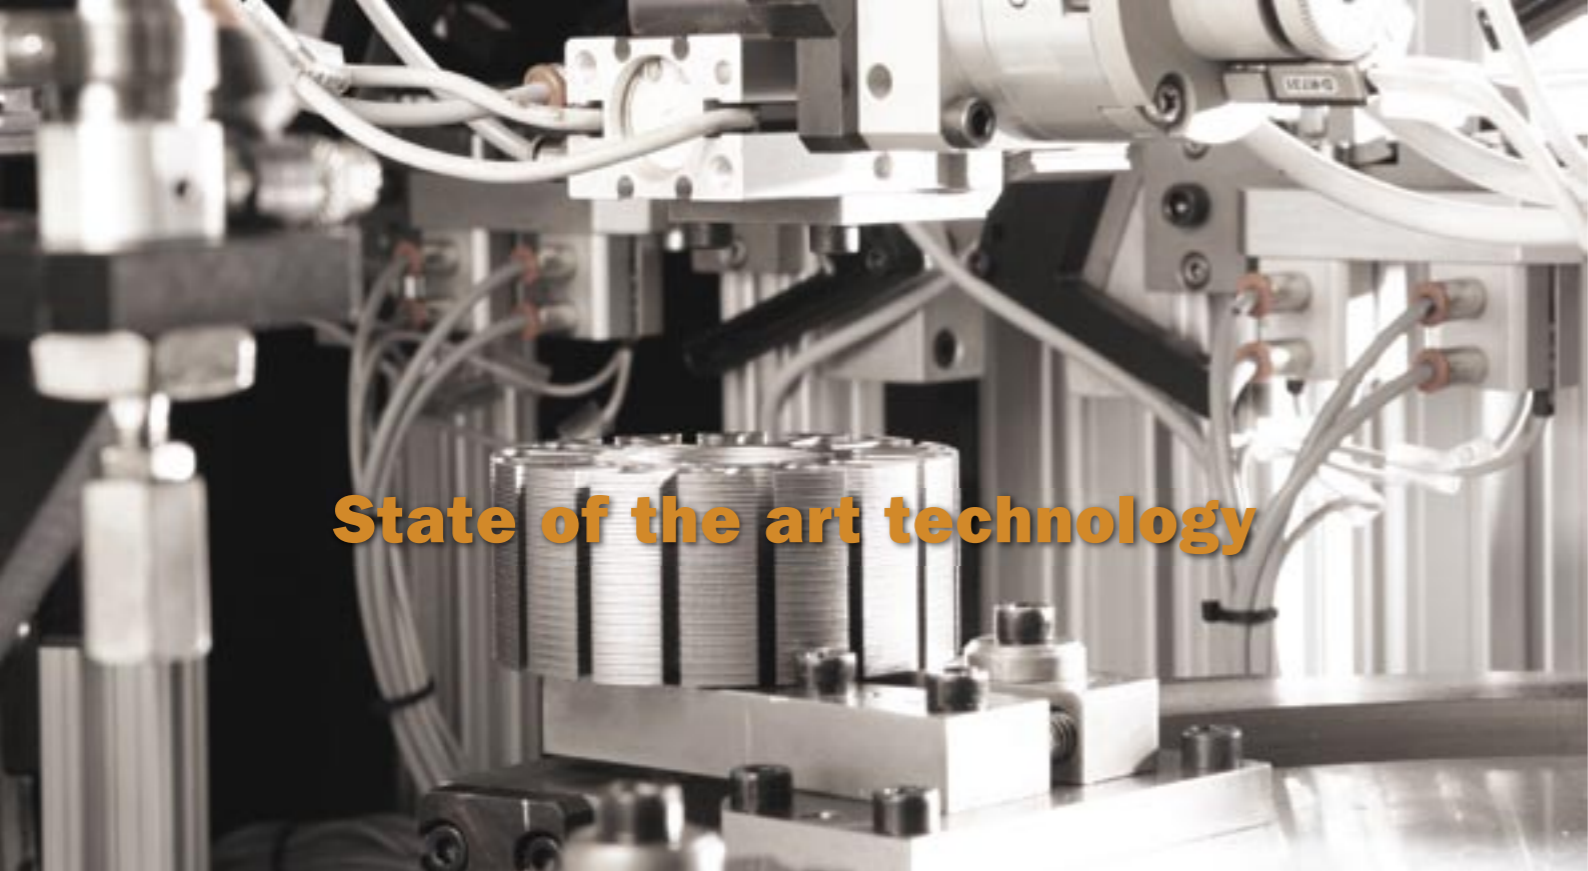

Hidria Rotomatika ranks among the leading European producers of custom-designed lamination and rotors, with over 30 years tradition and experience. Our corporate brand Hidria is well recognized among our customers all over the world, from the automotive industry, HVAC industry and various industrial applications.

Different grades of electrical steel, including non-grain-oriented (fully- and semi-processed) and grain-oriented, are used and transformed into numerous designs of loose lamination and interlocked stacks. Progressive carbide dies (single- to multiple-line), developed together with the world's most famous tool-makers are used. With the use of modern heat treatment furnaces the lamination are being annealed or blued to obtain the required magnetic properties. Rotors, high-pressure die-cast with aluminum or Al-alloys, are manufactured on advanced horizontal and vertical machines, using one to multiple-nest dies. Machining operations such as turning, grinding and shaft insertion enlarge the scope of production to meet and even exceed the highest customer requirements.

One of our main guidelines is R&D approach to innovative custom-designed solutions based on our capability of being development supplier. Long term experiences and know-how are the base for improved products, advanced steel grades implementation and strict geometric tolerances. Special emphasis is given to additional process automation. In order to support customer technical requirements and lead future development activities Hidria Institute for Materials and Technology was established.

Quality management system as one of the most important business elements is being constantly improved. Hidria Rotomatika is today certified according to ISO 9001:2000, ISO 14001:2004 and ISO/TS 16949:2002 standards.

State of the art technology
